PRICE LIST FORMAT

- A. Sheet Numbering - Sheet numbers appear in the upper right corner of the page. Sheets are numbered sequentially. However, new sheets are occasionally added to the price list. When a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 14 and 15 would be 14. 1.
- B. Sheet Revision Numbers - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current sheet version on file with the Commission. For example, the 4th revised Sheet 14 cancels the 3rd revised Sheet 14. Because of various suspension periods, deferrals, etc., the Commission follows in their price list approval process, the most current sheet number on file with the Commission is not always the price list page in effect.
- C. Paragraph Numbering Sequence - There are six levels of paragraph coding. Each level of coding is subservient to its next higher level:
- 2.
 - 2.1
 - 2.1.1.
 - 2.1.1.1.
 - 2.1.1.A.1.
 - 2. 1. 1.A. 1.(a).
- D. Check Sheets - The check sheet lists the sheets contained in the price list, with a cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There will be no other symbols used on the check sheet if these are the only changes made to it (i.e., the format, etc., remains the same, just revised revision levels on some pages). The price list user should refer to the latest check sheet to find out if a particular sheet is the most current.

SECTION 3 - SERVICE DESCRIPTIONS

3.1 Rates Charged Based on Timing of Calls

Where charges for service are specified based on the timing of calls, such as the duration of a telephone call, the following rules apply:

3.1.1 When Billing Charges Begin and Terminate For Phone Calls

The Customer's long distance usage charge is based on the actual usage of the Company's network. Usage begins when the called party picks up the receiver, (i.e. when two-way communication, often referred to as "conversation time," is possible). When the called party picks up is determined by hardware answer supervision in which the local telephone company sends a signal to the switch or the software utilizing audio tone detection. When software answer supervision is employed, up to 60 seconds of ringing is allowed before it is billed as usage of the network. A call is terminated when the calling or called party hangs up.

3.1.2 Billing Increments

Unless otherwise specified in this price list, the minimum call duration for billing purposes is 1 minute for a connected call. Calls beyond 1 minute are billed in 1 minute increments.

3.1.3 Per Call Billing Charges

Billing will be rounded up to the nearest penny for each call.

3.1.4 Uncompleted Calls

There shall be no charges for uncompleted calls.

Effective: April 1, 2020

SECTION 3 - SERVICE DESCRIPTIONS (Cont'd.)**3.2 Rates Based Upon Calculation of Distance**

At this time, the Company does not specify the charges for service based on the calculation of distance. However, if in the future the charges for service are specified based upon the calculation of distance, the following rules will apply:

3.2.1 Distance between two points is measured as airline distance between the Rate Centers of the originating and terminating telephone lines. The Rate Center is set of geographic coordinates, as referenced in National Exchange Carrier Association, Inc. Tariff FCC No. 4, associated with each NPA-NXX combination (where NPA is the area code and NXX is the first three digits of a seven-digit telephone number). Where there is no telephone number associated with an access line on the Company's network (such as dedicated 800 or WATS access line), the Company will apply the Rate Center of the Customer's main billing telephone number.

3.2.2 The airline distance between any two Rate Centers is determined as follows:

- A. Obtain the "V" (vertical) and "H" (horizontal) coordinates for each Rate Center from the above-referenced NECA tariff.
- B. Compute the difference between the "V" coordinates of the two rate centers; and the difference between the two "H" coordinates,
- C. Square each difference obtained in step B. above.

- D. Add the square of the "Y" difference and the square of the "H" difference obtained in step C.
- E. Divide the sum of the squares by 10. Round to the next higher whole number if any fraction is obtained.
- F. Obtain the square root of the whole number result obtained above. Round to the next higher whole number if any fraction is obtained. This is the airline mileage.
- G. Formula

$$\sqrt{\frac{|V_1 - V_2|^2 + |H_1 - H_2|^2}{10}}$$
